

# GLOBAL POWER CITY INDEX 2012

*Summary*

October 2012

INSTITUTE FOR URBAN STRATEGIES  
THE MORI MEMORIAL FOUNDATION

## **Summary of the *Global Power City Index-2012***

### **Preface**

Considering the fierce global competition between cities, the Global Power Index (GPI) evaluates and ranks the major cities of the world according to their "magnetism", ie. their comprehensive power to attract creative people and business enterprises from around the world.

Since the release of the first Global Power City Index in 2008, The Mori Memorial Foundation has been actively promoting its findings worldwide via the media and its website. This has led to numerous invitations to present at international symposiums in New York, Shanghai, Madrid and many other cities. The GPCI's findings have been well-received within the international community, stimulating active discussion and creating the opportunity to share ideas with the world's leading research institutes on the topic of urban competition.

In the 2012 edition of The Global Power City Index, the inclusion of five new cities (Barcelona, Stockholm, Istanbul, Mexico City and Washington D.C.) results in a total of forty cities worldwide being ranked. Nine cities in Japan (Sapporo, Sendai, Saitama, Kawasaki, Yokohama, Nagoya, Kyoto, Kobe and Hiroshima) will also be evaluated under the same criteria as the other forty global cities. By doing this, we will clarify the position of these Japanese cities among the world's major global cities.

It is hoped that these results will provide a benchmark in better understanding the strengths and weaknesses that Tokyo and other global cities possess, while offering a valuable resource to the public sector in the development of urban policy planning and private sector corporate strategies.

### **Features of the Global Power City Index**

1. The GPCI is the first attempt made by a research institute in Japan to analyze and rank the comprehensive power of the world's major cities.
2. As opposed to limiting the ranking to particular areas of research such as "Finance" and "Livability", the GPCI focuses on a wide variety of functions in order to assess and rank the global potential and comprehensive power of a city.
3. Forty of the world's leading cities were selected and their global comprehensive power evaluated based on the following viewpoints; six main functions representing city strength ("Economy", "Research and Development", "Cultural Interaction", "Livability", "Environment" and "Accessibility"), four global actors who lead the urban activities in their cities ("Manager", "Researcher", "Artist" and "Visitor") as well as one local actor ("Resident"), thus providing an all-encompassing view of the cities.
4. The 2012 edition of the GPCI has been improved upon once again, by re-examining the various indicator groups that make up the functions and revising their weights.
5. The challenges that Tokyo must address in order to overcome the weaknesses revealed by this survey have been clarified.
6. This ranking has been produced with the involvement of Professor Sir Peter Hall, a global authority in Urban Studies, as well as other academics in this field. It has been peer reviewed by third parties, all international experts from both the public and private sectors.

## **Findings of the GPCI-2012**

### **Key Messages**

- London now ranks top overall, having overtaken New York.
- Tokyo remains at No. 4, despite the effects of the Great Eastern Earthquake on some of the indicators.
- Among the second tier group of cities, Asian cities such as Beijing and Shanghai show continuing progress and are closing the gap between themselves and the top four cities. We also see that North American cities seem to be suffering from a downward trend and are slipping down the rankings.

### **1. Overall Trends (p. 8)**

London, New York, Paris and Tokyo are ranked as the top four cities respectively in the function-specific comprehensive ranking for 2012. Since 2008, when the GPCI first started, New York has always ranked first, but loses its crown this year to London, which now ranks first overall. However, this does not mean that New York's comprehensive power has declined. New York has maintained the same standard in all indicators as last year, but London, which was previously comparable to New York in the rankings, has increased significantly giving it an advantage over New York in the overall ranking.

This is due to the improvements made to London in the run up to the 2012 Olympics. An increase in the number of international conferences and other Olympic related pre-events held by the city aided by the government, improvements made to facilities and accommodation and actively attracting foreign visitors to the city is all reflected in the data.

Within the top four below New York, Paris and Tokyo remain in the same positions as last year. The gap between Singapore, ranked No.5, and the top four still remains substantial.

Tokyo maintains its position at No.4 and it appears to continue struggling in increasing its overall ranking. However, despite the effects of the Great Eastern Earthquake of March 11<sup>th</sup> 2011, Tokyo maintains its position, demonstrating its overall comprehensive power. The difference between Tokyo No.4 and Paris No. 3 is less than predicted, so it is hoped that Tokyo, with expected growth, will increase its ranking in the future.

Looking at the cities that rank below No. 4, two clear trends emerge: the continuing growth of Asian cities and the decline of North American cities, except for New York. This decline is most clearly seen in the slowing down on economic growth.

In the 2012 edition of the GPCI, the indicator groups have been revised and more weight placed in the function of "Economy" and less in "Research and Development". As North American cities previously scored highly in "Research and Development", the current emphasis on economic function sees their rankings suffer.

### **2. Function-specific Ranking (p. 9)**

London's only top rank is in the function of "Cultural Interaction". This is by a large margin so compensates for the city's lower scores in other areas, such as No.12 in "Environment" and No.20 in "Livability".

Tokyo ranks top in "Economy" and has jumped from No.6 to No.1 in "Environment". The reasons for this are high scores in the indicators "Percentage of Paper Recycled", "CO<sub>2</sub> Emissions" and "Water Quality". Tokyo is the only city that ranks highly in the functions of "Economy" and "Environment".

Furthermore, Tokyo shows no particular weakness in any function, thus demonstrating balanced comprehensive power.

Looking at the cities added to the GPCI this year, Stockholm ranks No.2 in "Environment" and Barcelona No.6 in "Cultural Interaction" which clearly shows the strength of each city.

On the other hand, although Washington D.C. ranks No. 10 in "Economy", its overall weakness is revealed by rankings of No. 39 in "Livability" and No. 36 in "Accessibility", as listed on the Creation Flow for Function-based Ranking (Fig 1-3, p. 6)

### **3. Actor-Specific Ranking (p.10)**

The top four cities all ranked within the top 5 for the global actor groups "Researcher", "Artist" and "Resident".

As for the global actor groups "Manager", Shanghai ranks No. 5 and Beijing No. 6, both achieving higher scores than Paris. The other Asian cities such as Singapore, Hong Kong and Seoul have also proven themselves to be strong competitors in this group.

Continuing from last year, North American cities such as Boston, Los Angeles and San Francisco remain strong with "Researcher".

As for "Artist", minor changes have occurred within the top-ranked cities, but generally the group remains static with the only significant change being the newly added Mexico City ranking No. 11. For "Visitor", the newly added Istanbul ranks No. 4, with other Asian cities outside of the top four also being strong.

The overall top ranked cities of London, New York, Paris and Tokyo dominate for "Resident" with North American and European cities also dominating the ranking from No. 5 and down in the middling group. Asian cities rank low in this group.

### **4. Olympic Bidding and the Comprehensive Power of Cities – The Effects of Securing Global Events on the Comprehensive Power of Cities (P. 11)**

In the run-up to the 2012 Olympic Games, London held an increased number of international conferences and other Olympic-related pre-events. Combined with the development of accommodation and the active encouragement for people to visit the city, London saw its indicators for "Number of International Conferences Held", "Number of Hotels" and "Number of Visitors from Abroad" all increase in the function of "Cultural Interaction" as well as receiving a high score in the global actor group "Visitor".

Among Tokyo, Madrid and Istanbul, the 3 cities currently bidding for the 2020 Olympic Games, Tokyo has the highest scores in all functions, giving it by far the strongest comprehensive power.

However, in the indicator groups "Cultural Resources" belonging to the "Cultural Interaction" function and the "Traffic Convenience" indicator belonging to the "Accessibility" function, Tokyo shows weakness when compared to Madrid and Istanbul.

Tokyo is weaker than Istanbul in the global actor group of "Visitor" due to a low score in "High-Class Accommodations".

### **5. The Comprehensive Ranking of Major Japanese Cities (p. 14-15)**

In the 2012 edition of the GPCI, Tokyo ranks No. 4, Osaka No. 17 and Fukuoka No. 33, with an additional nine major Japanese cities chosen having been assessed according to the same criteria. Between San Francisco, No. 31 and Kuala Lumpur, No. 34, there are the cities of Kyoto, Yokohama, and Kobe. Between Mexico City, No. 36 and Moscow, No. 38 are the cities of Saitama, Nagoya, Hiroshima, Sapporo, Sendai and Kawasaki.

This shows that the major Japanese cities all placed in the 30s.

While they scored low in the comprehensive ranking, some cities showed their urban strength in particular functions and placed highly, in the top two tiers.

In "Economy" and "Cultural Interaction", all the major Japanese cities except Tokyo and Osaka placed below No. 30. But in the function of "Research and Development", Kyoto, Yokohama and Nagoya placed equally as other global cities ranked around No. 20.

In the function of "Accessibility", Kawasaki, Yokohama and Saitama placed a little higher than the other major Japanese cities.

In the function of "Livability", the major Japanese cities scored relatively high, with Nagoya, Hiroshima, Kobe, Sapporo, Kyoto, Saitama and Sendai all scoring equal to the major global cities ranked between No. 5 and No. 11.

In the function of "Environment", the major Japanese cities also scored relatively high, with Kyoto, Kobe, Sendai, Hiroshima and Sapporo all scoring equal to the major global cities ranked between No. 1 and No. 12.

## 1. GPCI-2012 Methodology

### 1 – 1. GPCI-2012 Research Organization

This ranking is created under the GPCI Committee, chaired by Heizo Takenaka, Chairman of the Institute for Urban Strategies at the Mori Memorial Foundation and professor at Keio University. The Committee also includes scholars such as Professor Sir Peter Hall, a global authority in city planning, as well expert partners in various related fields. A third-party peer review has been undertaken to ensure the impartiality of the ranking.

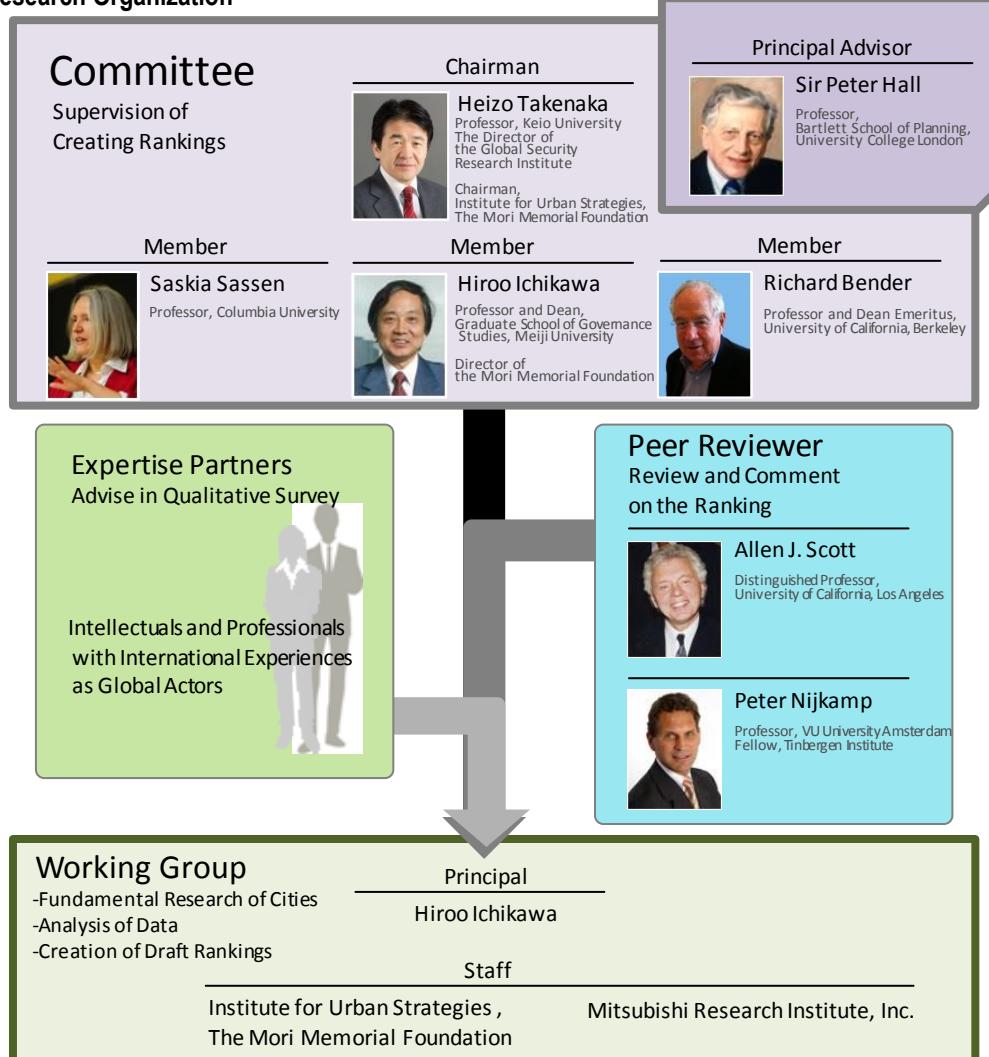

The GPCI Committee is comprised of five members, including Professor Sir Peter Hall, Professor at The Bartlett University College London as Principal Advisor, and Heizo Takenaka, Professor at Keio University and Director of the Global Security Research Institute, as Chairman. The Committee provides supervision of the ranking creation process at key points.

The Working Group, headed by Hiroo Ichikawa, Professor and Dean of the Graduate School of Governance Studies at Meiji University, as its Principal, performed the necessary research and analysis in order to create the rankings for the cities, and sought advice from expert partners worldwide regarding the perspective of global "Actors" to help in the creation of the ranking.

In order to ensure the impartiality of the ranking creation process and its results, a third-party peer review is undertaken to validate the contents and provide suggestions for improvement.

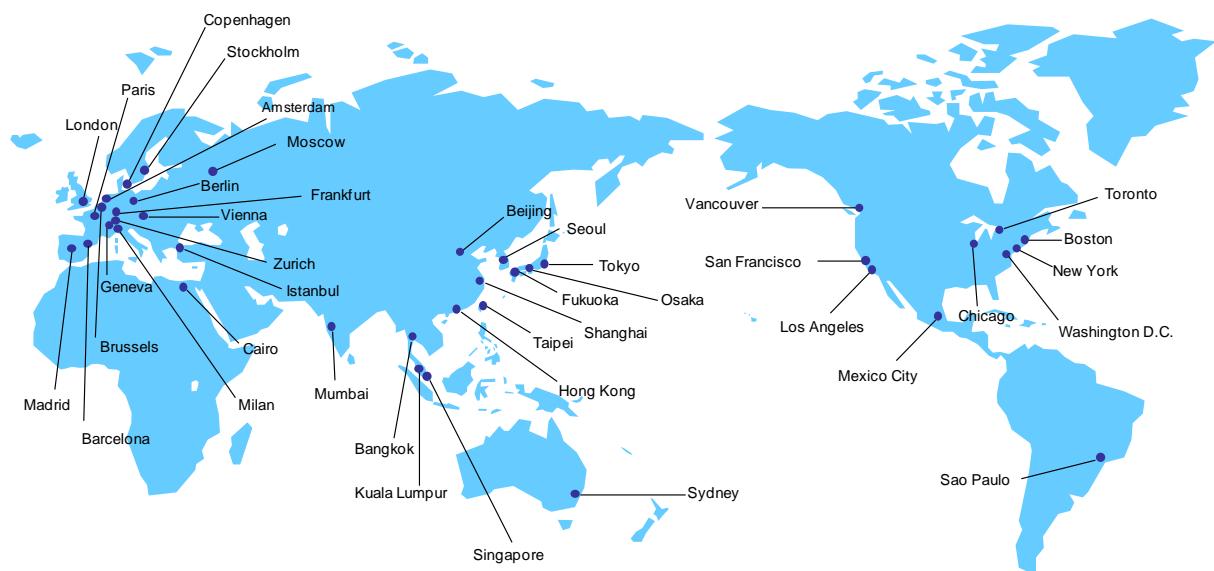

The GPCI-2012 has been created under the organization shown below.

Fig. 1-1– Research Organization

## 1 – 1. GPCI-2012 Research Organization

Fig. 1-2– Selected Forty Cities

Region	City
Europe	Madrid, <u>Barcelona</u> , London, Paris, Brussels, Amsterdam, Geneva, Frankfurt, Berlin, Zurich, Milan, Copenhagen, Vienna, <u>Stockholm</u> , <u>Istanbul</u> , Moscow
Africa	Cairo
Asia	Mumbai, Bangkok, Kuala Lumpur, Singapore, Hong Kong, Beijing, Shanghai, Taipei, Seoul, Fukuoka, Osaka, Tokyo
Oceania	Sydney
North America	Vancouver, San Francisco, Los Angeles, Chicago, Toronto, <u>Washington, D.C.</u> , New York, Boston
South America	<u>Mexico City</u> , Sao Paulo

※The underlined cities are newly added from this edition of the GPCI-2012.

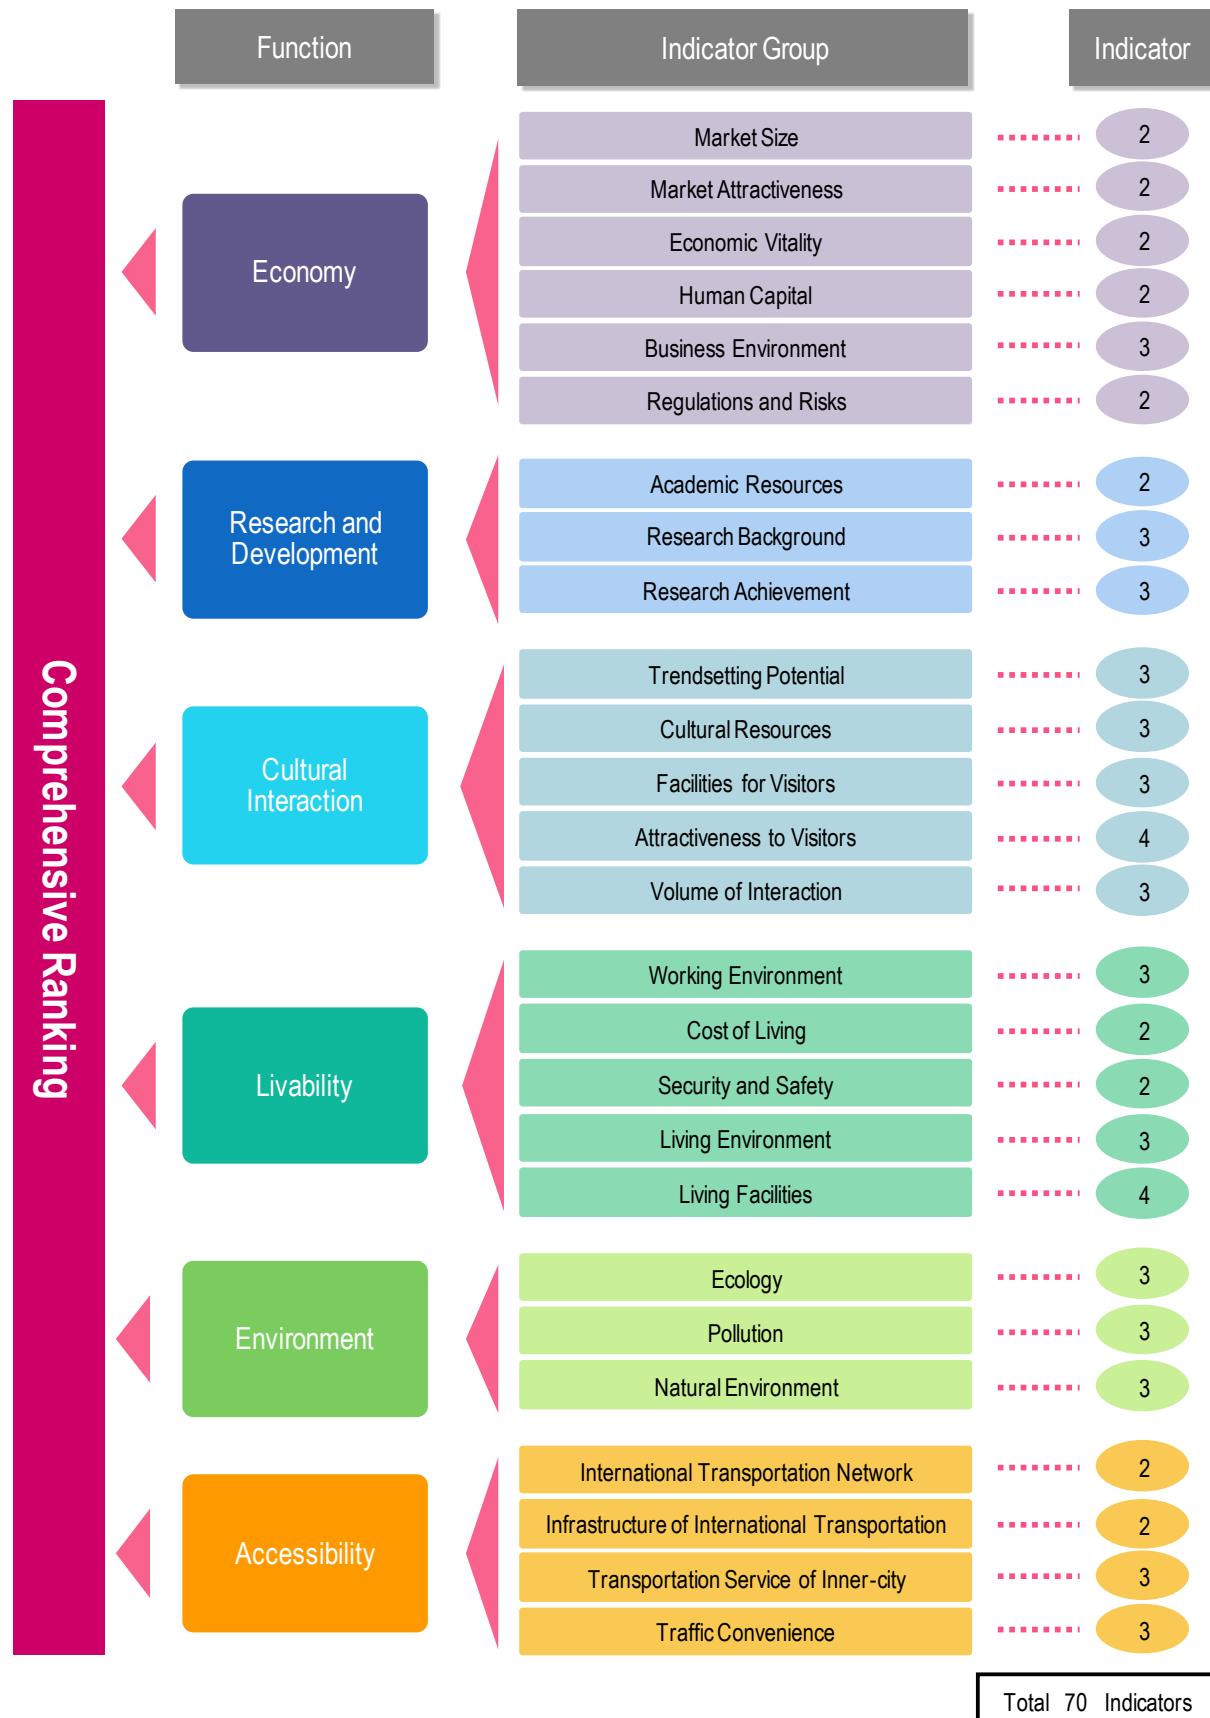

### The Criteria for Selection

- Cities found in the top ten of existing, influential city rankings ("The Global Financial Centres Index", "Worldwide Centers of Commerce Index" and "Cities of Opportunity")
- Major cities of countries which are in the top ten in terms of competition according to influential international competitiveness rankings (created by ("World Economic Forum", and "IMD")
- Cities which do not meet the above criteria but which are deemed appropriate for inclusion by the GPCI committee or its working members.

### 1-3. The Ranking Creation Method

The GPCI-2012 sees the indicator groups revised from last year, with the weighting adjusted for each function.

## 2-3. Actor-specific Ranking

**Table 2-2 – Actor-specific Ranking**

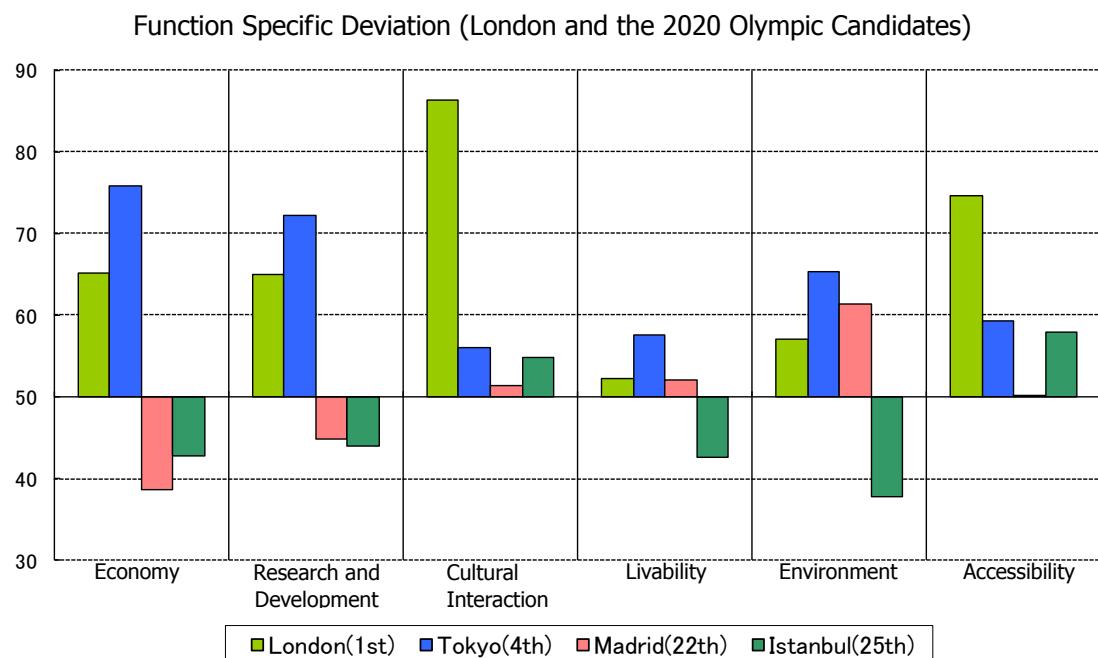

Rank	Manager	Researcher	Artist	Visitor	Resident
1	London	55.8 New York	63.5 Paris	58.0 London	58.5 Paris
2	Singapore	54.1 Tokyo	52.5 London	57.1 New York	54.6 London
3	Hong Kong	50.1 London	49.4 Tokyo	52.5 Paris	53.4 Tokyo
4	New York	49.4 Paris	47.9 Berlin	50.0 Istanbul	46.1 New York
5	Shanghai	47.8 Boston	36.1 New York	49.5 Hong Kong	45.4 Frankfurt
6	Beijing	47.7 Seoul	34.1 Barcelona	46.6 Tokyo	45.0 Berlin
7	Tokyo	45.0 Los Angeles	33.6 Vienna	46.5 Beijing	43.6 Zurich
8	Paris	44.9 Singapore	32.1 Los Angeles	44.7 Barcelona	42.9 Vienna
9	Seoul	44.4 San Francisco	31.4 Milan	43.0 Singapore	42.3 Washington, D.C.
10	Zurich	41.8 Chicago	29.0 Amsterdam	42.8 Shanghai	41.3 Vancouver
11	Berlin	41.7 Sydney	28.9 Mexico City	40.9 Berlin	40.7 Boston
12	Amsterdam	41.4 Washington, D.C.	28.4 Madrid	40.9 Seoul	40.0 Amsterdam
13	Geneva	40.2 Beijing	28.3 Toronto	40.1 Bangkok	38.9 Osaka
14	Vienna	40.0 Berlin	27.4 Stockholm	39.7 Vienna	37.3 Milan
15	Stockholm	39.6 Amsterdam	26.5 Beijing	39.6 Milan	37.1 Stockholm
16	Vancouver	39.2 Osaka	26.5 Sydney	38.1 Brussels	35.9 Copenhagen
17	Taipei	39.2 Zurich	25.9 Osaka	37.8 Amsterdam	35.1 Geneva
18	Sydney	38.7 Vienna	25.9 Brussels	37.7 Madrid	34.7 San Francisco
19	Toronto	38.7 Vancouver	25.0 Vancouver	37.3 Taipei	33.9 Barcelona
20	Copenhagen	38.4 Hong Kong	24.8 Copenhagen	37.2 Toronto	33.4 Brussels
21	Istanbul	38.2 Stockholm	24.4 San Francisco	36.9 Osaka	33.0 Madrid
22	Frankfurt	37.8 Copenhagen	24.3 Chicago	36.6 Sydney	32.9 Fukuoka
23	Kuala Lumpur	37.4 Toronto	23.7 Istanbul	35.8 Kuala Lumpur	32.8 Toronto
24	Boston	36.2 Geneva	23.7 Fukuoka	35.5 Cairo	32.1 Sydney
25	Washington, D.C.	34.8 Brussels	22.7 Frankfurt	35.2 Frankfurt	31.8 Seoul
26	Osaka	34.6 Moscow	22.0 Bangkok	35.2 Chicago	31.7 Hong Kong
27	Chicago	33.8 Barcelona	21.1 Shanghai	35.0 Vancouver	31.4 Shanghai
28	Barcelona	33.5 Mexico City	20.8 Moscow	33.6 Mexico City	31.4 Taipei
29	Brussels	33.3 Madrid	20.0 Kuala Lumpur	33.6 Boston	30.1 Beijing
30	Madrid	32.7 Shanghai	19.9 Taipei	32.5 Fukuoka	29.6 Singapore
31	Bangkok	32.6 Taipei	19.2 Seoul	32.3 Moscow	29.6 Los Angeles
32	Los Angeles	31.7 Milan	19.1 Cairo	31.9 Stockholm	29.6 Mexico City
33	Fukuoka	31.2 Fukuoka	19.0 Mumbai	30.9 San Francisco	28.5 Chicago
34	San Francisco	30.3 Frankfurt	19.0 Washington, D.C.	30.6 Copenhagen	27.6 Moscow
35	Mumbai	29.5 Istanbul	17.8 Sao Paulo	30.0 Los Angeles	27.1 Istanbul
36	Moscow	28.2 Bangkok	17.5 Zurich	29.3 Zurich	25.5 Kuala Lumpur
37	Cairo	28.0 Kuala Lumpur	15.5 Geneva	28.7 Mumbai	24.4 Bangkok
38	Milan	27.4 Sao Paulo	14.9 Singapore	28.0 Washington, D.C.	23.7 Cairo
39	Sao Paulo	25.2 Mumbai	10.3 Boston	25.1 Geneva	21.6 Mumbai
40	Mexico City	24.4 Cairo	9.0 Hong Kong	24.1 Sao Paulo	16.0 Sao Paulo

## 2-4. Olympic Bidding and the Comprehensive Power of Cities – The Effects of Securing Global Events on the Comprehensive Power of Cities

---

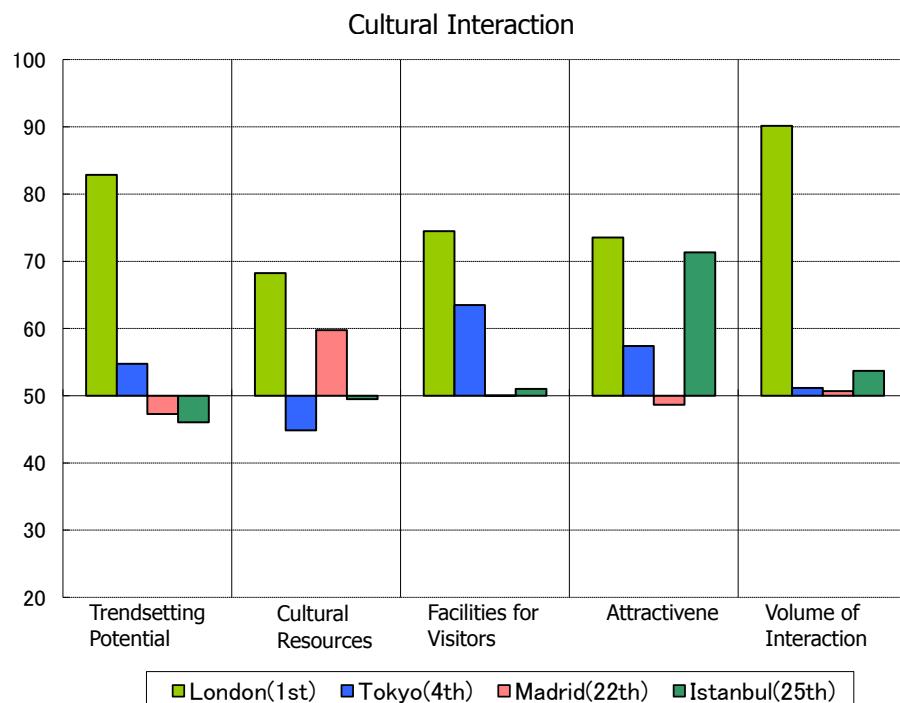

### (1) Function-specific Deviation Analysis for London and the 2020 Olympic Candidates

**Fig. 2-2 – Function Specific Deviation**

### (2) Indicator Group-specific Deviation Analysis for London and the 2020 Olympic Candidates

**Fig. 2-3 – Indicator Group-specific Deviation Analysis for “Cultural Interaction”**

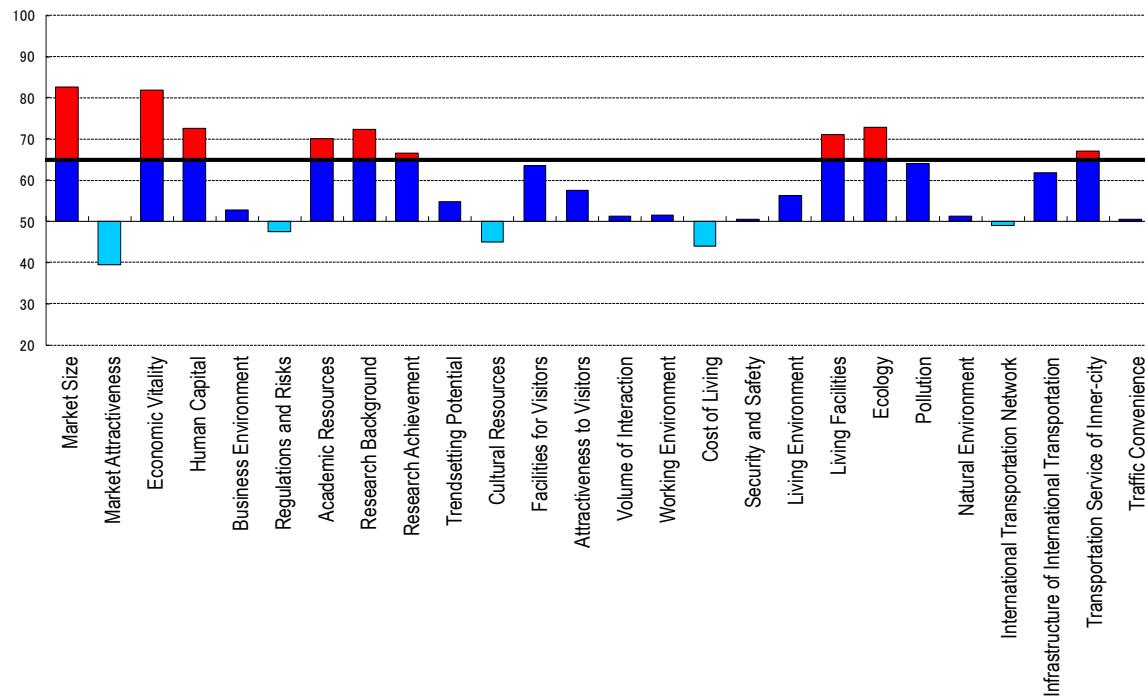

## 2-5. Analysis of Tokyo's Strengths and Weaknesses

Tokyo shows strength in the indicator groups "Market Size", "Economic Vitality" and "Human Capital" belonging to the function of "Economy" as well as in all the indicator groups of the "Research and Development" function. High scores are also seen in "Living Facilities" in the "Livability" function and "Ecology" in the function of "Environment".

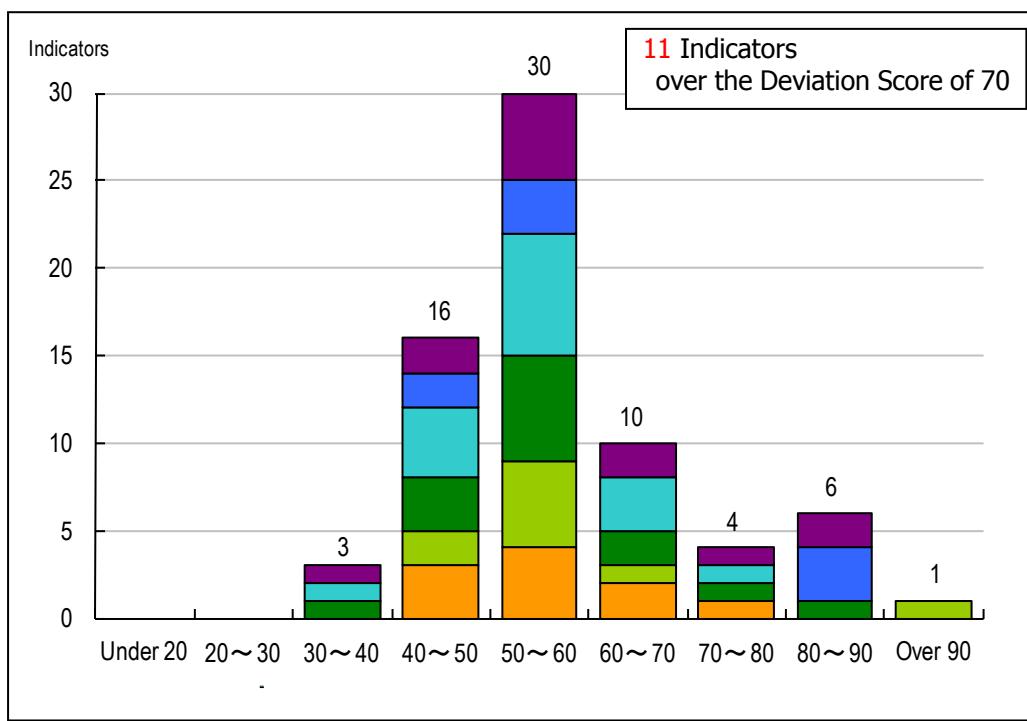

Indicator groups where Tokyo is weak compared with other cities include "Market Attractiveness", "Regulations and Risks", "Cultural Resources", "Cost of Living" and "International Transportation Networks". Tokyo's weaknesses in these areas continue from last year.

Another continuing characteristic of Tokyo is its weakness in the indicator groups for "Cultural Interaction".

**Fig. 2-4 – Tokyo's Indicator Group-specific Deviation**

**Fig. 2-5 – Indicator Numbers of Tokyo by Deviation Score**

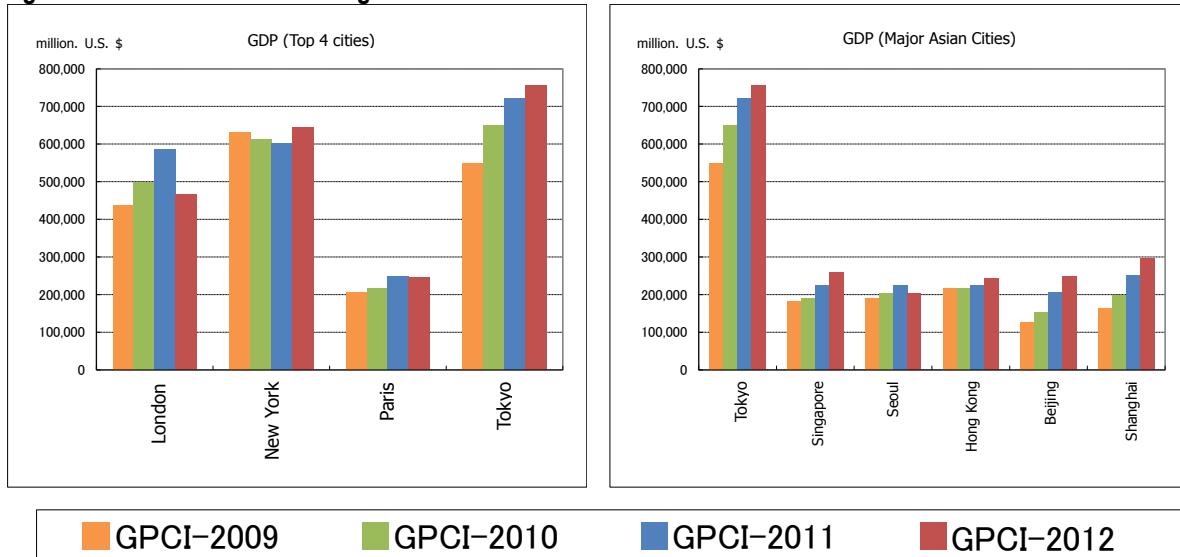

## 2-6. Over Year Trends

### 1) GDP

When the top four and major Asian cities are compared, Tokyo continues to lead in terms of "Nominal GDP". Singapore, Beijing and Shanghai all show a remarkable increase in their "Nominal GDP".

**Fig. 2-6 – GDP – Periodical Change**

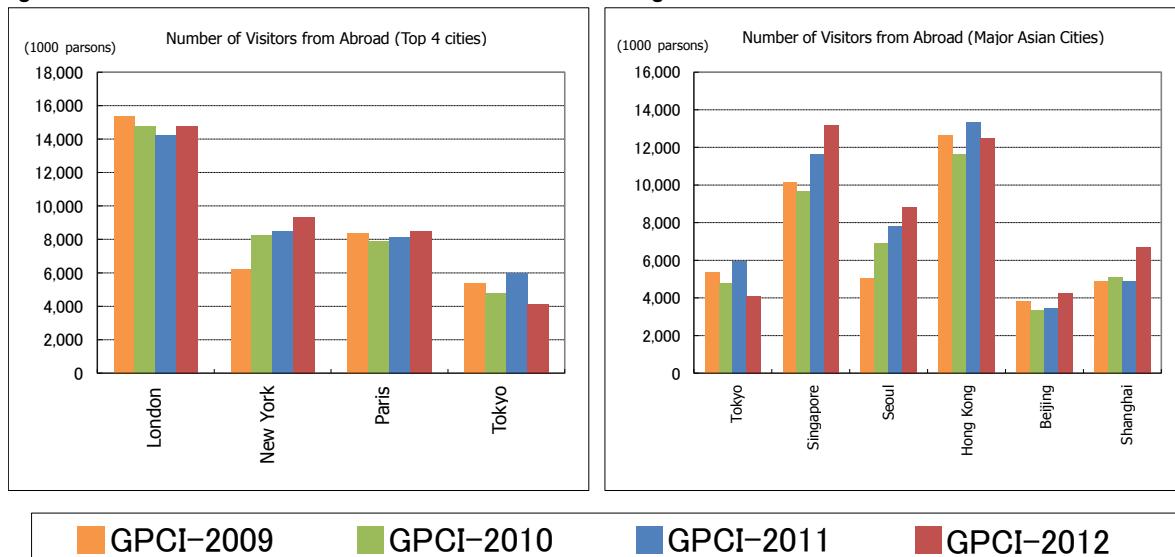

### 2) Number of Visitors from Abroad

In the 2011 edition of the GPCI, this number increased for Tokyo due to the 'Visit Japan' campaign initiated by the government. But the number decreased in the 2012 GPCI due in large to the Great Eastern Earthquake. Tokyo ranks the lowest among the top four cities and the major Asian cities in this indicator.

Among the major Asian cities, Singapore and Seoul are doing well in this indicator and are steadily increasing their scores.

**Fig. 2-7 – Number of Visitors from Abroad – Periodical Change**

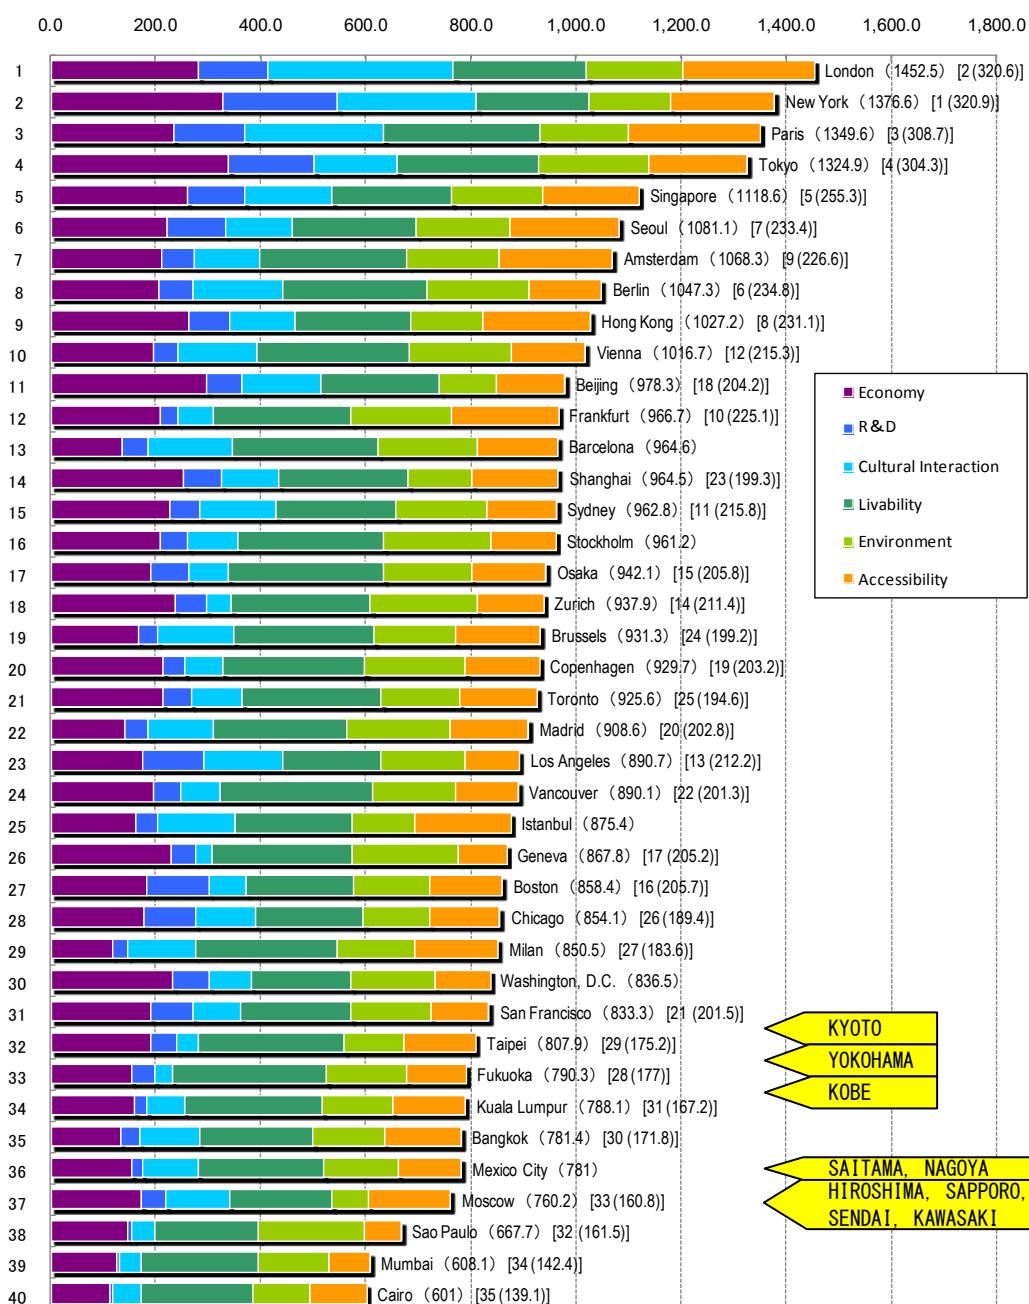

### 3. The Placement of Japanese Cities within the GPCI-2012

In the 2012 edition of the GPCI, Tokyo, Osaka and Fukuoka are ranked among the forty major global cities, with Tokyo No. 4, Osaka No. 17, and Fukuoka No. 33. Furthermore, the nine following cities designated by government ordinance but also with a population of over 1 million, Sapporo, Sendai, Saitama, Kawasaki, Yokohama, Nagoya, Kyoto, Kobe and Hiroshima are assessed under the same criteria as the other forty global cities on the list, to clarify their placement.

As a result, between San Francisco, No. 31 and Kuala Lumpur, No. 34, there are the cities of Kyoto, Yokohama, and Kobe. Between Mexico City, No. 36 and Moscow, No. 38 are the cities of Saitama, Nagoya, Hiroshima, Sapporo, Sendai and Kawasaki.

**Fig. 3-1 – Placement of Nine Major Japanese Cities based on the GPCI-2012**

## [GPCI-D] Function-specific Ranking

	Rank	Total Score	Rank	Economy	Rank	R&D	Rank	Cultural Interaction	Rank	Livability	Rank	Environment	Rank	Accessibility
1	London	1452.5	1	TOKYO	338.9	1	New York	217.3	1	London	353.5	1	Paris	288.7
